

NZRise

Hon Craig Foss  
Minister of Commerce  
Parliament Buildings  
Wellington  
*BY EMAIL*

10 September 2012

Dear Mr Foss,

1. This letter has been jointly authored by the Institute of IT Professionals New Zealand, InternetNZ, NZRise and the NZ Open Source Society and is endorsed by Orion Healthcare and Jade Corporation, the two largest software exporters in New Zealand, as well as over a thousand software developers and companies.
2. We are jointly writing as representatives of the New Zealand software industry in relation to the Supplementary Order Paper (SOP) you recently released for the Patents Bill, and specifically the changes to the patentability of software.
3. The New Zealand software industry is, by and large, strongly in favour of removal of patentability of software and the change we are requesting below to your SOP. As an indication, **1024 individuals representing a variety of software companies have counter-signed a request for this change in just a few days**. Their names and companies (where applicable) are included as an attachment to this letter.
4. We applaud the Government's intentions in relation to the Patents Bill in general and agree that the Patents system in New Zealand is very overdue for a revamp and by and large, the changes being made are positive and will support and incentivise innovation.
5. We support the approach you are intending in relation to software in principle, being the removal of patentability of software in general while providing for the patentability of inventions that *utilise* embedded systems in otherwise physical implementations, e.g. as component control mechanisms in equipment and whiteware.

6. The Government's decision to remove patentability of software has helped promote a favourable innovation environment and a very positive reputation for New Zealand as a technology destination. As an indication of this, a number of overseas tech companies serious about relocating to New Zealand as a result of this decision have approached a number of the associations co-signing this letter.
7. However with respect, **we strongly believe the wording put forward in the Supplementary Order Paper will not achieve the desired outcome.** We are of the view that it will create major ambiguity resulting in significant expense to New Zealand software innovators.
8. Further, the ambiguous wording will erode, and is eroding, the goodwill gained for New Zealand in the international software community as a result of the earlier announcement from Government that software would cease to be patentable.
9. We have provided alternative wording in section (18) below which meets the Government's intended outcome for New Zealand while maintaining compatibility with New Zealand's international obligations. At the same time this will provide a less ambiguous outcome in law.
10. Due to the ambiguous nature of the current wording, we are unable to support the SOP as currently written and respectfully request that you modify the wording to that outlined below to create greater certainty and less opportunity for abuse.
11. Should you change the proposed wording, we stand ready to strongly support this change and to join with you in publicly advocating this law as an example of New Zealand's innovative approach and suitability as a technology destination.

## **Current approach**

12. The current Supplementary Order Paper replaces the previous clause explicitly removing the patentability of software, with the following:

**10A(1)** *A computer program is not an invention for the purposes of this Act.*

**10A(2)** *Subsection (1) prevents anything from being an invention for the purposes of this Act only to the extent that a patent or an application relates to a computer program as such.*

13. We understand the rationale for 10A(1) and endorse this change.
14. We also understand why 10A(2) has been included (the stated intention being to be clear that inventions that may rely on embedded systems for part of their implementation would remain patentable), however are of the view that the wording is ambiguous and, as has been the case in all

other jurisdictions that have used similar wording, will come under sustained legal attack at significant expense to kiwi innovators.

15. A representative body of Australian IP lawyers *Institute of Patent & Trade Mark Attorneys of Australia* wrote to your predecessor in 2010 stating:

*"We would be concerned that if New Zealand adopted wording comparable to that of the [European Patent Office], that there is no such body of precedents in New Zealand that would guide an understanding of use of the terminology "as such" and the "technical effect" requirement. In our view, adopting the EPC approach would create a significant degree of uncertainty as to how the section is to apply and which, in any event, is inherent in the EPO approach."*

They also go on to say that use of "as such" would cause significant unpredictability.

16. The view of the Patent Attorneys has been borne out in other jurisdictions including in Europe itself, where this wording has caused significant uncertainty and unpredictability.

17. In our view, Parliament has an obligation to state more clearly their intentions in enacting this law through the Bill's wording itself, rather than implementing ambiguous wording and leaving it to the Courts to decide what is intended.

## **Alternative wording**

18. We propose that 10A(2) from the Ministerial SOP be replaced with the following less ambiguous wording:

*10A(2): Subsection (1) does not prevent an invention that makes use of an embedded computer program from being patentable.*

19. We acknowledge that the term "embedded computer program" is not defined in law, however note that "computer program" is not either and believe Parliament's intention is clearer with this alternative clause, leaving the boundaries of embedded software to be determined by the Courts on a case-by-case basis as appropriate.

## **Outcome sought**

20. We request that either:
- a. The SOP wording for 10A(2) is replaced by the alternative wording in (18) above, or
  - b. The Minister briefly delays the passage of the Patents Bill to consider this change, engaging with the software industry, or
  - c. In the alternative, this clause is referred back to the Commerce Select Committee for consultation and consideration.

## Who we are

21. This letter is sent on behalf of the following organisations:

- **Institute of IT Professionals NZ**, the largest and oldest IT body in New Zealand, representing thousands of IT professionals nationwide;
- **NZRise**, a nationwide association representing New Zealand owned and operated ICT, Software and Technology companies;
- **NZ Open Source Society**, a non-profit charitable organisation set up to protect, advocate and advance the use of Open Source Software;
- **InternetNZ**, a non-profit open membership organisation dedicated to protecting and promoting the Internet in New Zealand and fostering a coordinated, cooperative approach to its ongoing development.
- **Orion Healthcare** and **Jade Corporation** are New Zealand's two largest software exporters, collectively producing over 50% of software exported from New Zealand. Both have endorsed this request.
- Attached are the names of **1024 individuals and representatives** of kiwi software companies who are jointly calling for this change.

22. Further comments can be found at <http://softwarepatents.org.nz> and background to this call at <http://www.iitp.org.nz/newsletter/article/380>

We trust you will consider this matter with urgency.

Yours sincerely,

Paul Matthews  
CEO, Institute of IT Professionals NZ

Paul Ramsay  
Co-Chair, NZRise

Dave Lane  
President, NZ Open Source Society

Vikram Kumar  
Chief Executive, InternetNZ

*[Note: Signatures removed in public version]*

## Endorsements for this changed wording

We, the undersigned:

- *Believe that innovation is hindered, not helped, by software patents;*
- *Believe that the current clause 10A(2) of the Patents Bill undermines the exclusion of software patents;*
- *Request that Commerce Minister Craig Foss alter the Supplementary Order Paper for the Patents Bill currently awaiting its second reading before NZ Parliament to read as follows:*
  - 10A(2): Subsection (1) does not prevent an invention that makes use of an embedded computer program from being patentable.*
